

Annotation credit program module "Descriptive geometry and engineering graphics" discipline "MPN. 05 Engineering and Computer Graphics

The program exposed the role of discipline for studying other disciplines such as applied mechanics; design elements appliances; metrology; the study subjects in the specialty; cycle disciplines of vocational and practical training of students at the undergraduate study; in the course and diploma projects; goals and objectives credit module, which is to build students' abilities geometric modeling and computer methods of instrumentation products; construction and design of engineering drawings and schemes according to the current standards, knowledge of the basic principles of geometric modeling objects; projection methods of construction and study of spatial objects at their flat images on the drawings; existing state requirements and international standards.
